membership of sac

drug industry profiteers

other industries profiteers

1 national animal protection organization (who is this?)

representatives selected by nih from a college, another govt agency, intl regulatory body or other corporate profiteers

i note that the revolving door from industry pervades what is going on at this agency. and i do not believe this membership is at all a cross section of the american public. i urge that you change the membership to more clearly reflect the american public, rather than corporate profiteers.
